
Omari Ricketts, Data Scientist

Mobile Number: 07375227308

Email: Omari_ricketts@hotmail.com

Location: Stretford(M32), Manchester

Professional Summary

Versatile and technically capable Data Scientist with hands-on experience in deploying AI/ML systems using Azure Machine Learning, Azure Document Intelligence, Docker, and Kubernetes. Proven track record in developing end-to-end document processing pipelines, containerising python applications, orchestrating cloud deployments and handling large-scale data systems. Strong understanding of cloud architecture, machine learning, and data reporting with the ability to transform business needs into automated, intelligent data workflows. Adept at building Power BI dashboards to communicate insights and support data-driven decision-making across high-impact business functions.

Technical Skills

- **Programming & Tools:** Python, SQL, Power BI, DAX, R, Apache Spark
- **Cloud & DevOps:** Azure Machine Learning, Azure Document Intelligence, Azure Blob Storage, Azure Kubernetes Service (AKS), Docker, Kubernetes, YAML
- **Data Science & Machine learning:** Scikit-learn, TensorFlow, PyTorch, NLP (Transformers), OCR (Tesseract), PDFPlumber, ETL, Data Governance
- **Other:** Power Platform, Excel, Linux, Microsoft 365, LIMS systems

Professional experience

Katch Investment Group, June 2024 - Current

Data Scientist

- Designed and implemented end-to-end document analysis pipelines, integrating Azure Document Intelligence to extract structured data from scanned documents.
- Automated secure document retrieval from CRM platforms via authenticated APIs, generating keys and using SAS tokens for controlled access to Azure Blob Storage.
- Stored and organised extracted data into SQL Server databases, enabling downstream analytics and reporting.
- Containerized Python processing scripts using Docker, and deployed them to AKS with Kubernetes YAML, Secrets, and ConfigMaps to build scalable, production-ready pipelines that processed over 100 million document pages.
- Developed and trained Azure Machine Learning classification models to categorise documents into 18 classes, with automated model versioning and monitoring.
- Led the technical design and build of a production-ready API client for a European banking provider, implementing OAuth authentication, configurable column selection, catch-up logic via state tracking, and full Docker containerisation for deployment.
- Performed end-to-end data processing workflows, managing the entire lifecycle from extracting raw data from CRM systems, processing and cleaning data for accuracy and integrity, to analysing and transforming it into actionable insights, and ultimately developing reports and visualizations to support strategic business decisions.
- Engineered a case reference matchback pipeline to reconcile client-level and claim-level data across mismatched granularity; introduced a loan schedule model into Power BI enabling rollup from individual case level through to drawdown and overall book, providing a unified hierarchical view of the loan book.
- Created and maintained interactive Power BI dashboards to visualize key metrics, enabling real-time monitoring of company performance and KPIs to support decision-making across campaigns valued at over half a billion pounds (See GitHub).

HM Revenue & Customs, March 2023 - December 2023

Pensions officer

- Conducted thorough reviews of pension records, resolving discrepancies and maintaining accurate member data.
- Performed regular audits to verify the accuracy and completeness of pension records.

GlobalData PLC, August 2022 - October 2022**Associate Data Analyst**

- Translated data into actionable insights for stakeholders by producing monthly and quarterly reports that summarise trends and offer strategic recommendations, supporting informed decision-making.
- Collected and collated research from both primary and secondary data sources in order to update and maintain databases and data systems.
- Conducted interviews with market players to observe current market trends to aid in data analysis.

Medicines Discovery Catapult, April 2021 - April 2022**Clinical Scientist**

- Performed initial preparation, inactivation and completion of RNA extraction of patient samples within a class II biological containment cabinet within a UKAS accredited ISO 15189 laboratory.
- Operated Hamilton liquid handling machines, thereby automating the assay protocol.
- Managed and handled clinical data via a laboratory information management system (LIMS), critically analysing the completed biological procedures to ensure validity of the results.

Education

MSc Data Science, Manchester Metropolitan University**September 2023- September 2024**

- Recipient of the prestigious scholarship awarded by the Office for Students in recognition of academic excellence for individuals who are members of underrepresented groups within AI and Data Science.
- Conducted end-to-end machine learning analysis, encompassing the entire workflow from data compilation, exploration, and cleaning to implementing algorithms like k-nearest neighbours, boosted trees, random forest, and linear regressors, resulting in insightful classification and regression predictions on a range of real-world datasets.
- Utilised various statistical methods and hypothesis tests - including Bayesian inference, ANOVA, chi-square tests, and correlation analysis - to evaluate feature significance, compare model performance, and ensure robustness and interpretability of results.
- Proficient in developing and implementing Convolutional Neural Networks for image and video localisation, segmentation, and classification tasks using PyTorch and TensorFlow frameworks, as well as natural language processing tasks using Transformer architectures.
- Designed a custom CNN using a modified HRNet-W32 with Sharpness-Aware Minimization, achieving 17th place (top 10%) out of 201 in the DFUC2021 diabetic foot ulcer classification challenge.

BSc Chemistry, University of Manchester**2017-2020**

- Strong emphasis on report writing, use of Microsoft Excel, data collection, data handling as well as practical experience using programming languages Python and MATLAB to capture and analyse numerical/chemical data.

Projects and Highlights

- Document AI System: Built an end-to-end OCR pipeline using Azure Document Intelligence, Docker, and Kubernetes that processed over 100M pages from scanned PDFs.
- Cloud ML Pipelines: Developed and deployed ML models in Azure ML Studio.
- API-based Document Ingestion: Created a CLI tool to fetch, tag, and process documents securely from APIs using Python + SAS tokens.
- Produced end-to-end interactive Power BI dashboards for 12 major marketing and investment campaigns, some valued at up to half a billion pounds, enabling real-time tracking of key performance metrics and supporting high-stakes strategic decisions.
